Cabinet Leaf

From the mosque of al-Azhar

Wood, Ivory

W: 44.2 cm; H: 93 cm

Hall 4

Inv. no. 2972

Cabinet leaf in a typically Mamluk style, featuring an elegant interlocking joinery composition of halved twelve- and eight-pointed stars in wood and ivory. Though the panel would once have presented a striking visual effect, the surviving inlay and joinery pieces have suffered considerable loss: many of the ivory elements are missing, and one half of the central twelve-pointed star is absent. Remnants of the original metal hinge fixtures are preserved along the outer edge.
