Ceiling

From a ruin in Darb al-Aqmaʿiyya

Wood

W: 70 cm; L: 120 cm

Inv. no. 2602

Flat wooden ceilings provided an ideal surface for overall designs. Acquired from a site in Darb al-Aqmaʿiyya, this example features cruciform motifs formed out of elongated hexagonal battens, octofoils, and circular medallions on a ground of prominent arabesques, with surviving polychromy in blue or green, cream, and red.
